

# On the Go with GAGetrak

Introducing GAGetrak's Portable Calibration Solution.

## The World's #1 Calibration Management Solution is now portable!

GAGetrak's new Portable Calibration Solution (PCS) lets you export gage calibration data from your GAGetrak software to a Netbook or laptop to perform calibrations in the field. Exported data can be accessed directly from SD or USB Flash media for easy transfer between your PC and the Netbook or laptop.

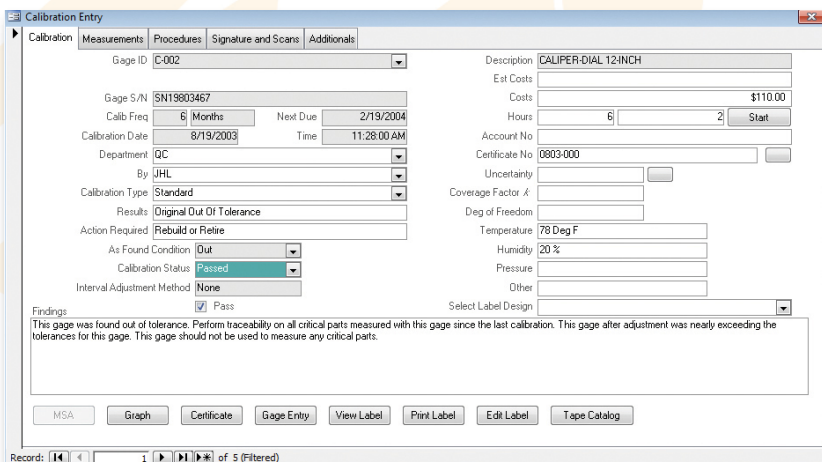

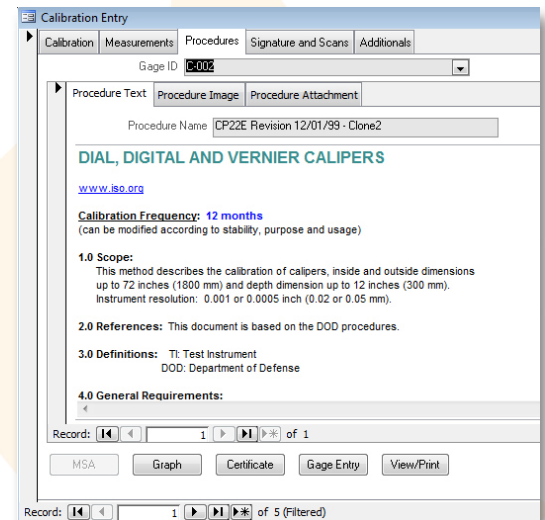

PCS includes the Portable Calibration software module, a portable printer and a Netbook. With the Portable Calibration Module and the Netbook, you can view full text procedures, gage information screens, calibration data and calibration related reports. The GAGetrak screens are enhanced to fit most 10" Netbook displays (1024 x 700).

Choose either of the portable battery-powered printers to print calibration certificates and failure notifications and generate durable calibration and bar-coded labels directly from GAGetrak. Labels can be printed in a variety of sizes, from 1/4 inch to 1 inch, and are available in a variety of colors.

## Do You Outsource Your Calibrations?

Don't waste time re-entering data from your calibration certificates. Get the Portable Calibration Module for your service provider, then export your gage and calibration requirements to SD or USB Flash memory to send it out with your gages. Your service provider uses the module to update your calibration data, and when the gages come back, you can easily synchronize the data with your GAGetrak database, saving time and money!

Order the Portable Calibration Solution today and you'll be going places.
